

# Assignment-1(Calculator App)

Create an engineering calculator as shown in the pictures (portrait, landscape). Calculator must work without any bugs. More bugs (errors, warnings, crashes) I find, more points you'll lose. All the logical and calculation part must be done using MVC design paradigm. It is not necessary to make exactly the same UI (try to think of your own design).

All buttons that are shown in pictures must work perfectly to the point where you would want to upload your app to the AppStore.

Any extra features will be rewarded. Good luck!!!

Deadline: [05.02.2021]
