Assignment-7(Places)

Create an application based on a MapKit. User must be able to <u>mark the certain place</u> by a long click on a map entering the title and description. Features of the app:

a) <u>changing</u> the map type(standard, satellite, hybrid) with segment controller with blurred background

b) <u>Navigating</u> throughout all places by simply double clicking next to the segment controller(right-forward, left-backward).Title of the navigation controller must change to the navigated place's name.

c) <u>Listing</u> all the places on TableView by clicking the bar button on navigation controller. After clicking, tableview must appear on a blurred map. Whenever user clicks the tableview's cell, it should hide the tableview and navigate to the place that was selected.

d) <u>Deleting</u> the place by simply sliding to the left on tableview and clicking the red delete button.

e) <u>Editing</u> the place by clicking on the info button in annotation and going to the editViewController. User can only change the title and description of the place.

ALL THE PLACES MUST BE SAVED IN CORE DATA!
